XKEYSCORE

25 Feb 2008

xkeyscore@nsa

What is XKEYSCORE?

1. DNI Exploitation System/Analytic Framework

2. Performs strong (e.g. email) and soft (content) selection

3. Provides real-time target activity (tipping)

4. "Rolling Buffer" of ~3 days of ALL unfiltered data seen by XKEYSCORE:
   - Stores full-take data at the collection site – indexed by meta-data
   - Provides a series of viewers for common data types

1. Federated Query system – one query scans all sites
   - Performing full-take allows analysts to find targets that were previously unknown by mining the meta-data

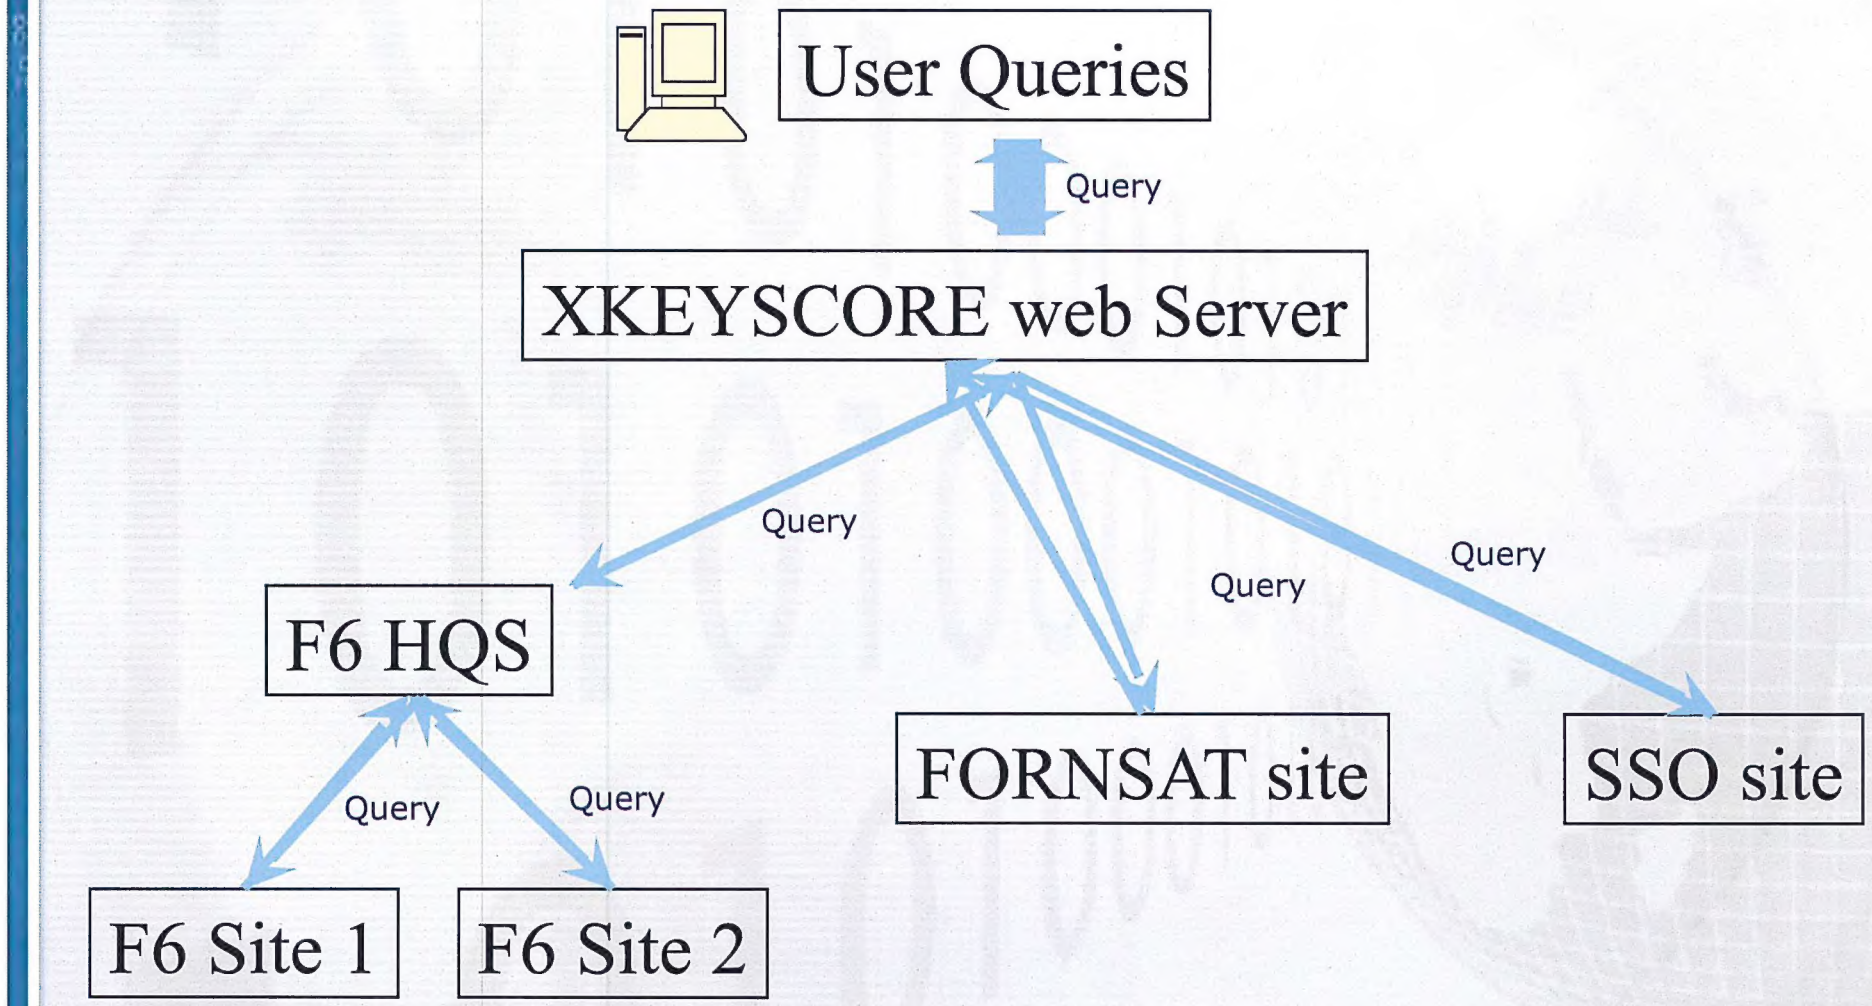
Methodology

- Small, focused team
- Work closely with the analysts
- Evolutionary development cycle (deploy early, deploy often)
- React to mission requirements
- Support staff integrated with developers
- Sometimes a delicate balance of mission and research

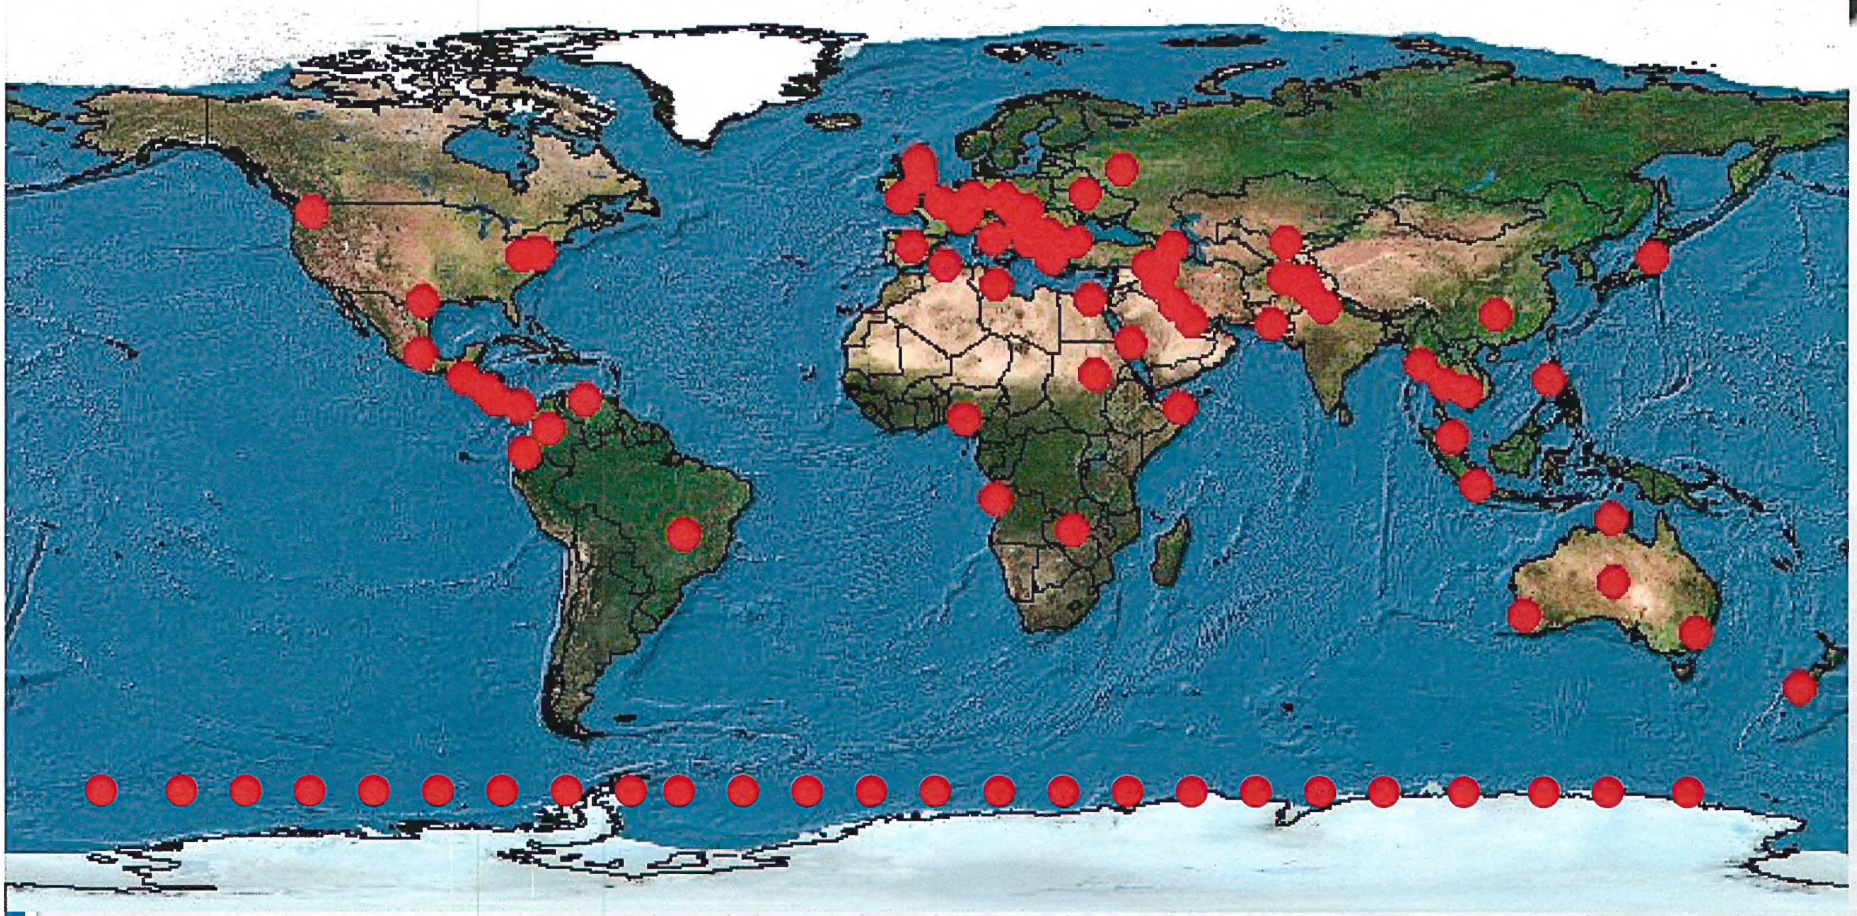
System Details

- Massive distributed Linux cluster
- Over 500 servers distributed around the world
- System can scale linearly – simply add a new server to the cluster
- Federated Query Mechanism

Query Hierarchy



Where is X-KEYSCORE?

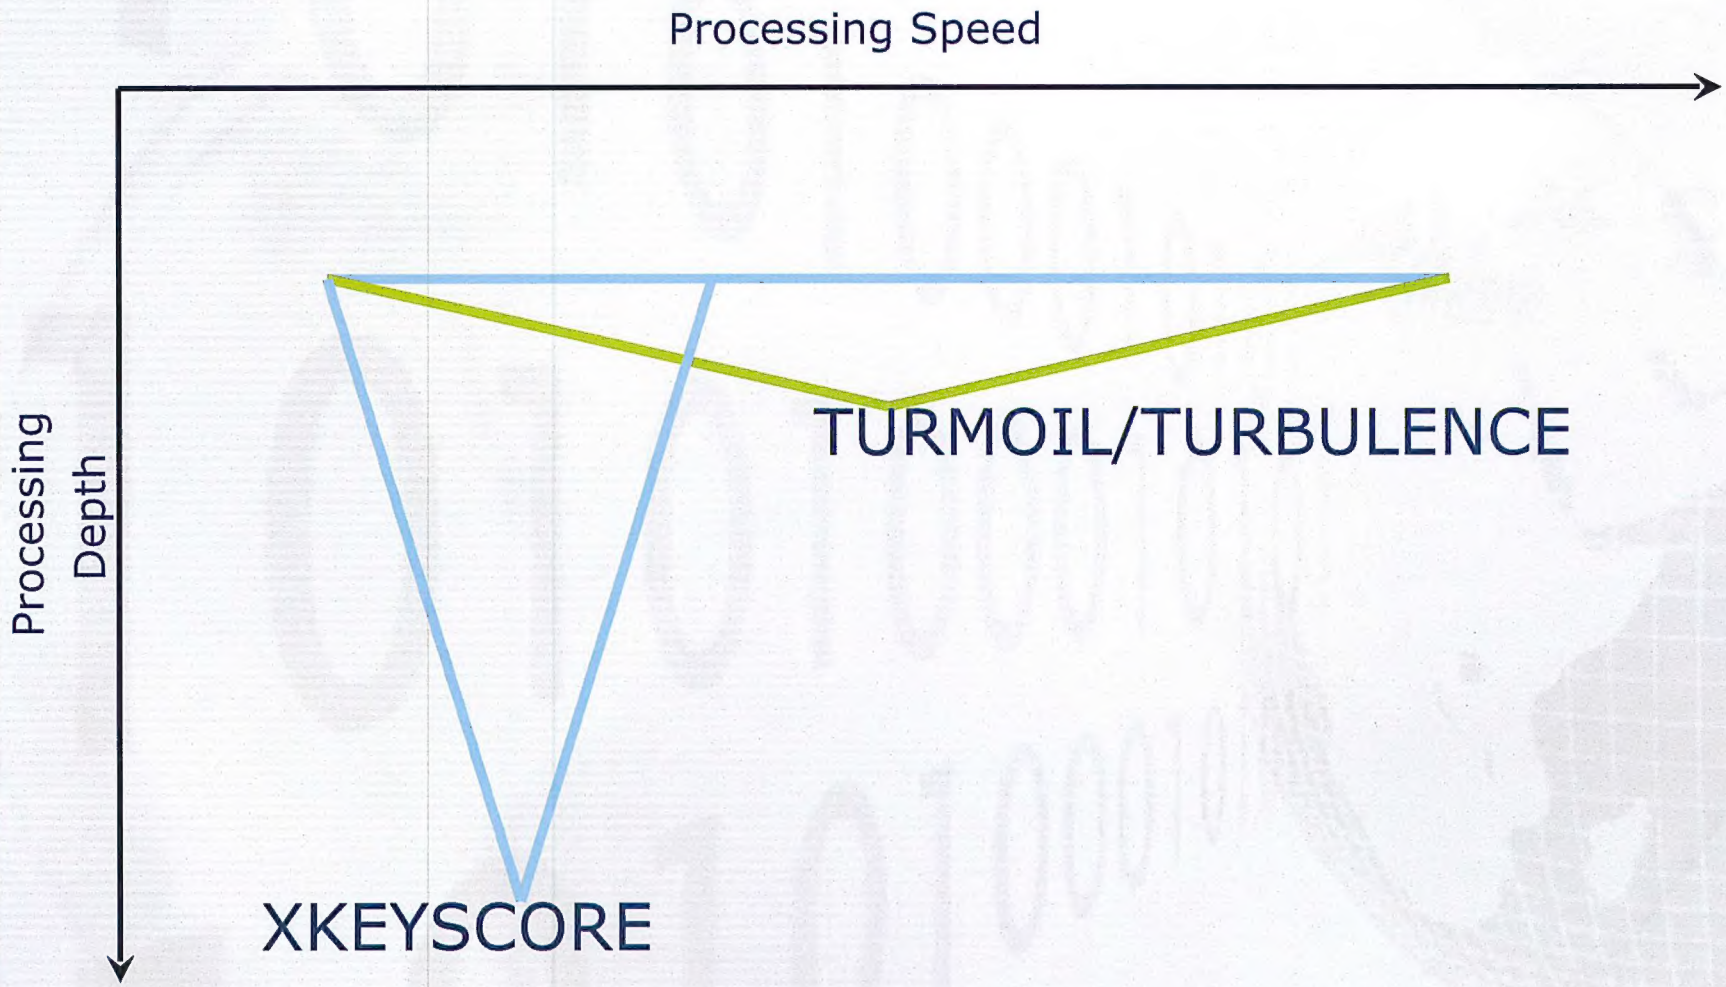


Approximately 150 sites

Over 700 servers

What is unique about XKEYSCORE?

General Capability



Why do shallow

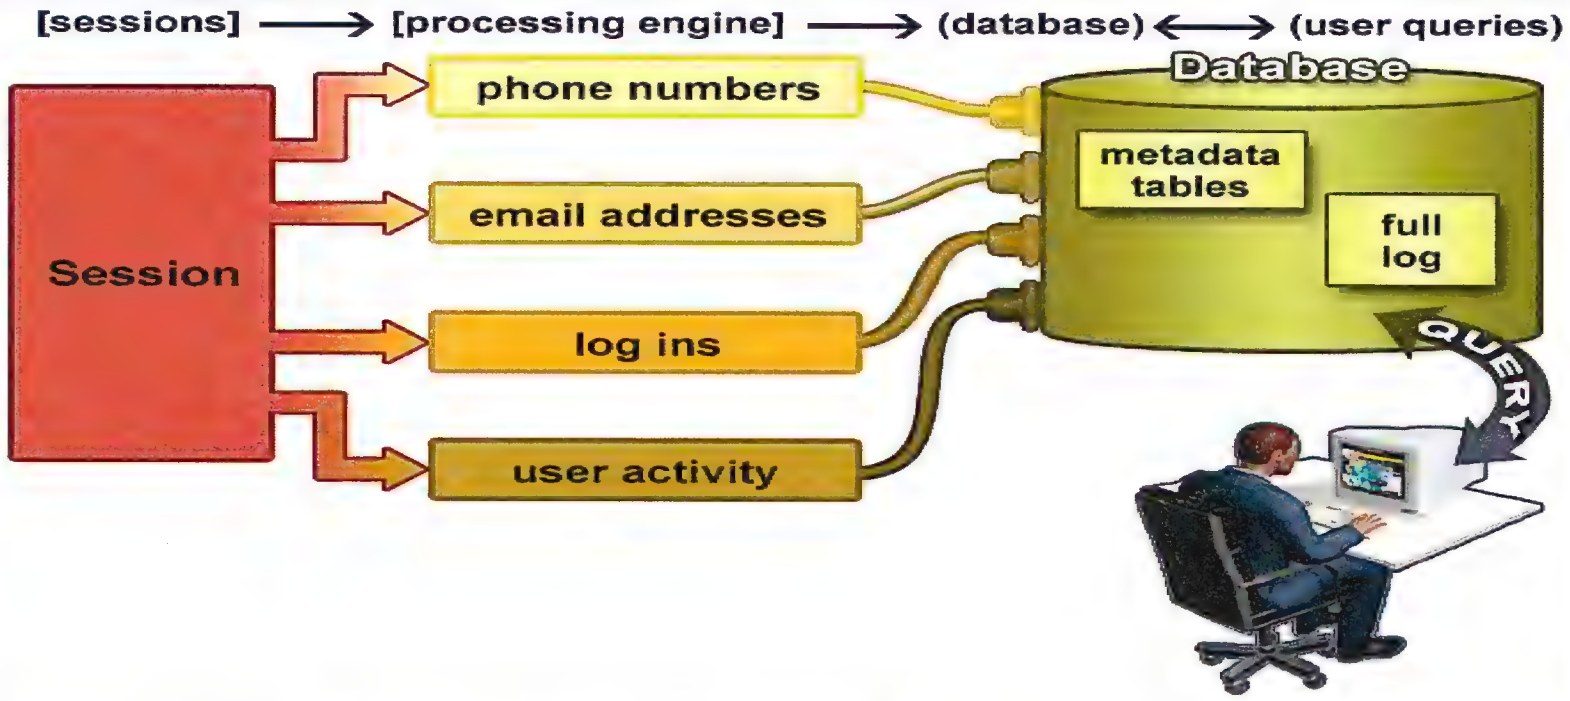
- Can look at more data
- XKEYSCORE can also be configured to go shallow if the data rate is too high

Why go deep

- Strong Selection itself give us only a very limited capability
- A large amount of time spent on the web is performing actions that are anonymous
- We can use this traffic to detect anomalies which can lead us to intelligence by itself, or strong selectors for traditional tasking

What XKS does with the Sessions

Plug-ins extract and index metadata into tables



Plug-ins

Plug-in	DESCRIPTION
E-mail Addresses	Indexes every E-mail address seen in a session by both username and domain
Extracted Files	Indexes every file seen in a session by both filename and extension
Full Log	Indexes every DNI session collected. Data is indexed by the standard N-tupple (IP, Port, Casenotation etc.)
HTTP Parser	Indexes the client-side HTTP traffic (examples to follow)
Phone Number	Indexes every phone number seen in a session (e.g. address book entries or signature block)
User Activity	Indexes the Webmail and Chat activity to include username, buddylist, machine specific cookies etc.

What Can Be Stored?

- Anything you wish to extract
  - Choose your metadata
  - Customizable storage times
  - Ex: HTTP Parser

[redacted]

```
GET /search?hl=en&q=islamabad&meta= HTTP/1.0
Accept: image/gif, image/x-xbitmap, image/jpeg, image/pjpeg, application/vnd.ms-
application/msword, application/x-shockwave-flash, */*
Referer: http://www.google.com.pk/
Accept-Language: en-us
User-Agent: Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1)
Host: www.google.com.pk
[redacted]
Connection: keep-alive
```

No username/strong selector

What can you do with XKEYSCORE?

Finding Targets

- How do I find a strong-selector for a known target?
- How do I find a cell of terrorists that has no connection to known strong-selectors?
- Answer: Look for anomalous events
  - E.g. Someone whose language is out of place for the region they are in
  - Someone who is using encryption
  - Someone searching the web for suspicious stuff

Encryption

- Show me all the encrypted word documents from Iran
- Show me all PGP usage in Iran

  - Once again – data volume too high so forwarding these back is not possible
  - No strong-selector
  - Can perform this kind of retrospective query, then simply pull content of interest from site as required

Technology Detection

- Show me all the VPN startups in country X, and give me the data so I can decrypt and discover the users
  - These events are easily browsable in XKEYSCORE
    - No strong-selector
  - XKEYSCORE extracts and stores authoring information for many major document types – can perform a retrospective survey to trace the document origin since metadata is typically kept for up to 30 days
  - No other system performs this on raw unselected bulk traffic, data volumes prohibit forwarding

Persona Session Collection

- Traditionally triggered by a strong-selector event, but it doesn't have to be this way
- Reverse PSC – from anomalous event back to a strong selector. You cannot perform this kind of analysis when the data has first been strong selected.
- Tie in with Marina – allow PSC collection after the event

Language Tracking

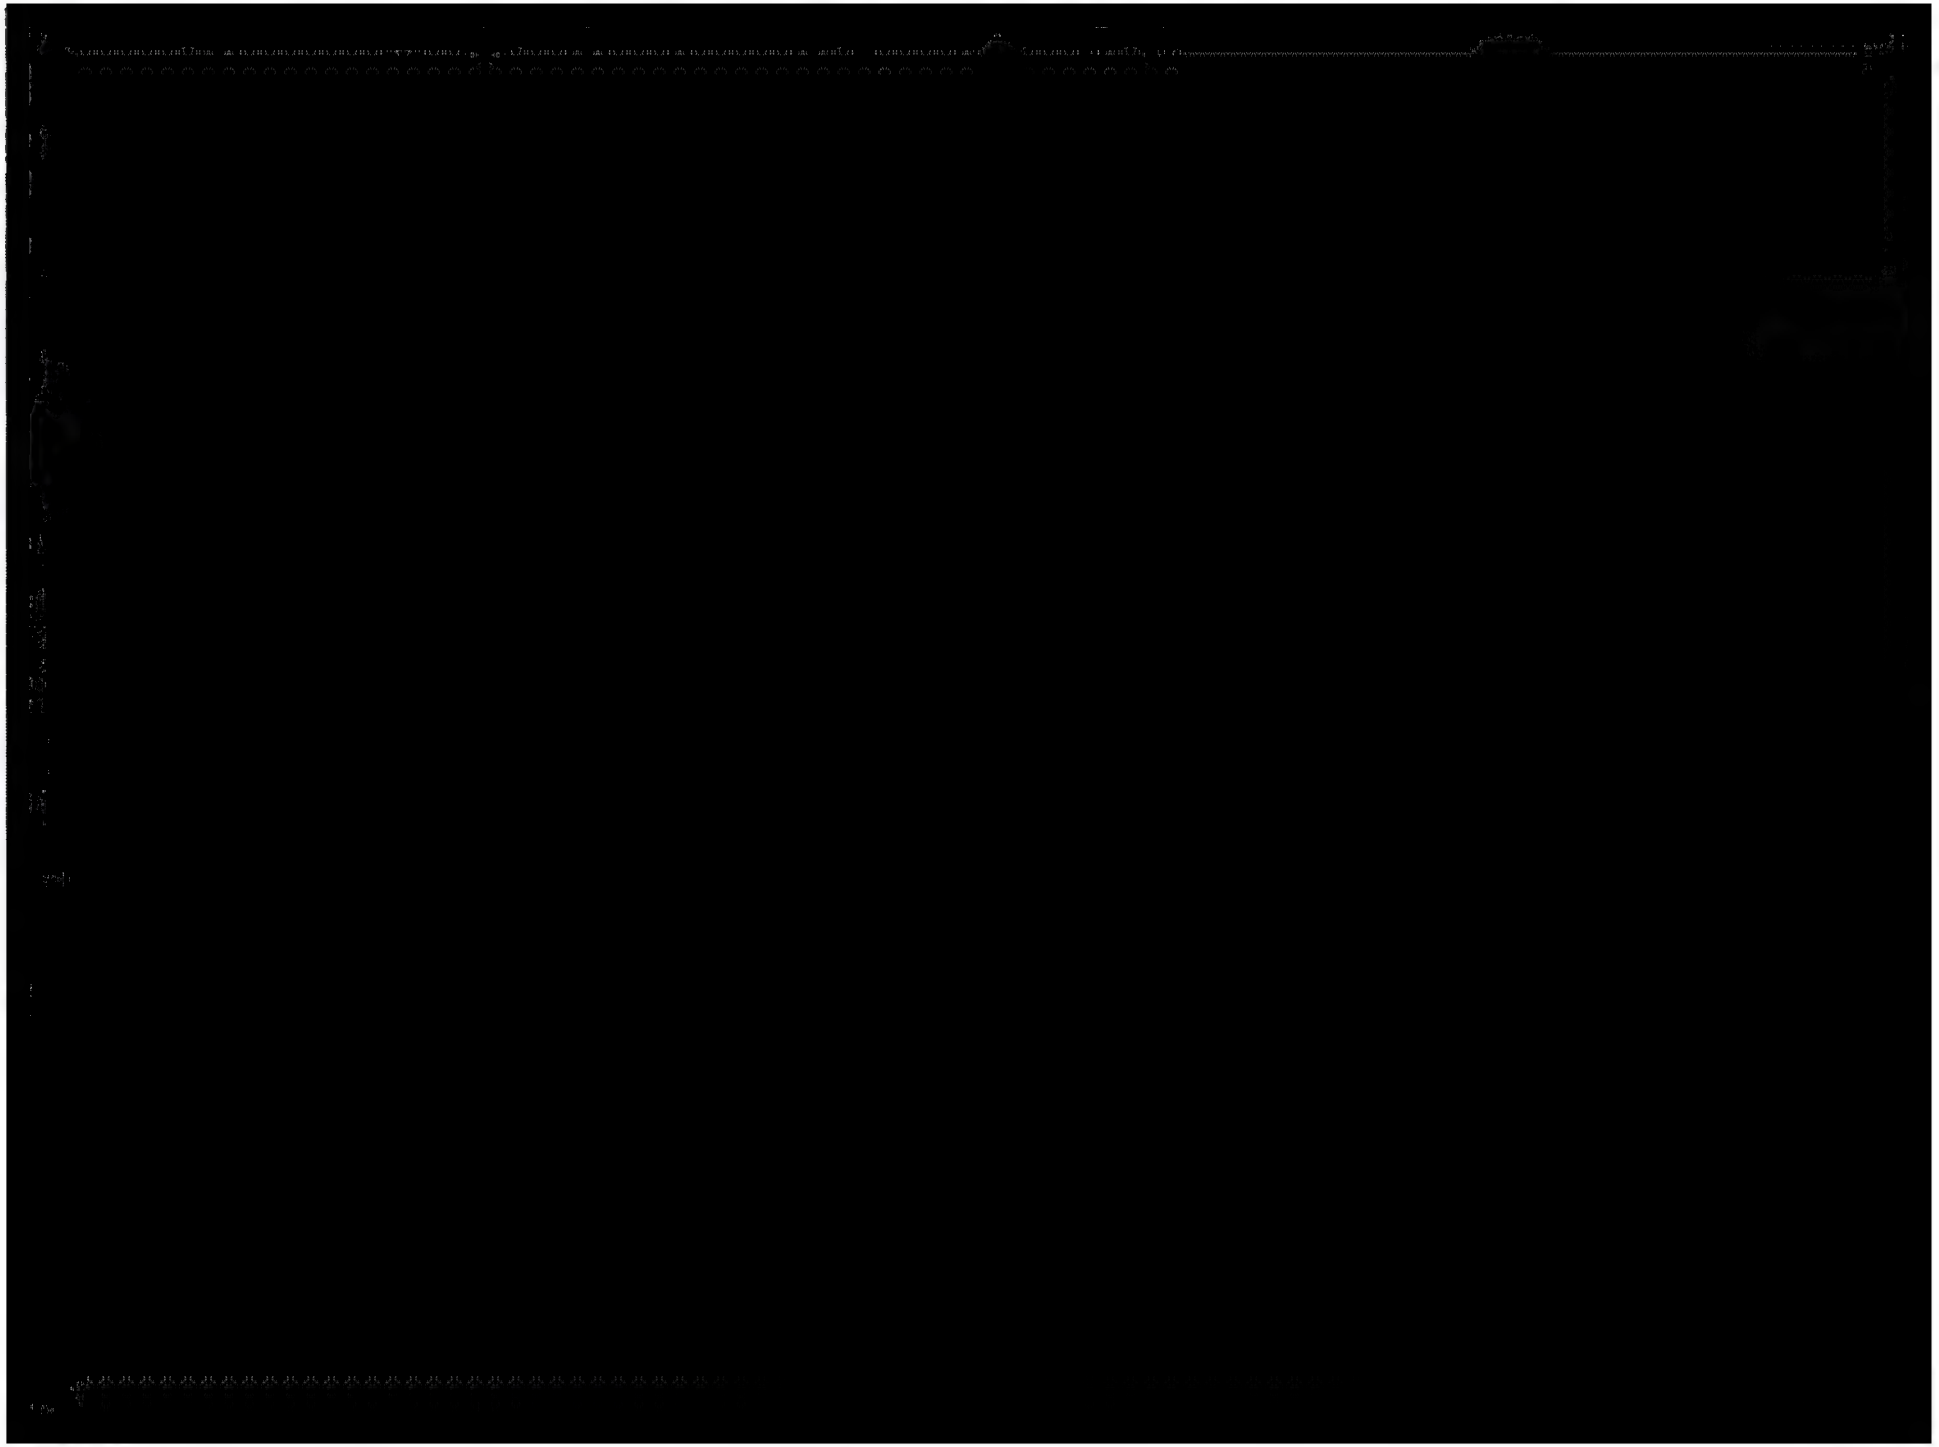
- My target speaks German but is in Pakistan – how can I find him?
  - XKEYSCORE's HTTP Activity plugin extracts and stores all HTML language tags which can then be searched
  - Not possible in any other system but XKEYSCORE, nor could it be –
    - volumes are too great to forward
    - No strong-selector

Google Maps

- My target uses Google Maps to scope target locations – can I use this information to determine his email address? What about the web-searches – do any stand out and look suspicious?
  - XKEYSCORE extracts and databases these events including all web-based searches which can be retrospectively queried
  - No strong-selector
  - Data volume too high to forward

Document Tracking

- I have a Jihadist document that has been passed around through numerous people, who wrote this and where were they?



Interesting Document Discovery

- Show me all the Microsoft Excel spreadsheets containing MAC addresses coming out of Iraq so I can perform network mapping
  - New extractor allows different dictionaries to run on document/email bodies – these more complex dictionaries can generate and database this information
  - No strong-selector
  - Data volume is high
  - Multiple dictionaries targeted at specific data types

TAO

- Show me all the exploitable machines in country X
  - Fingerprints from TAO are loaded into XKEYSCORE's application/fingerprintID engine
  - Data is tagged and databased
  - No strong-selector
  - Complex boolean tasking and regular expressions required

Discovery of new target web services

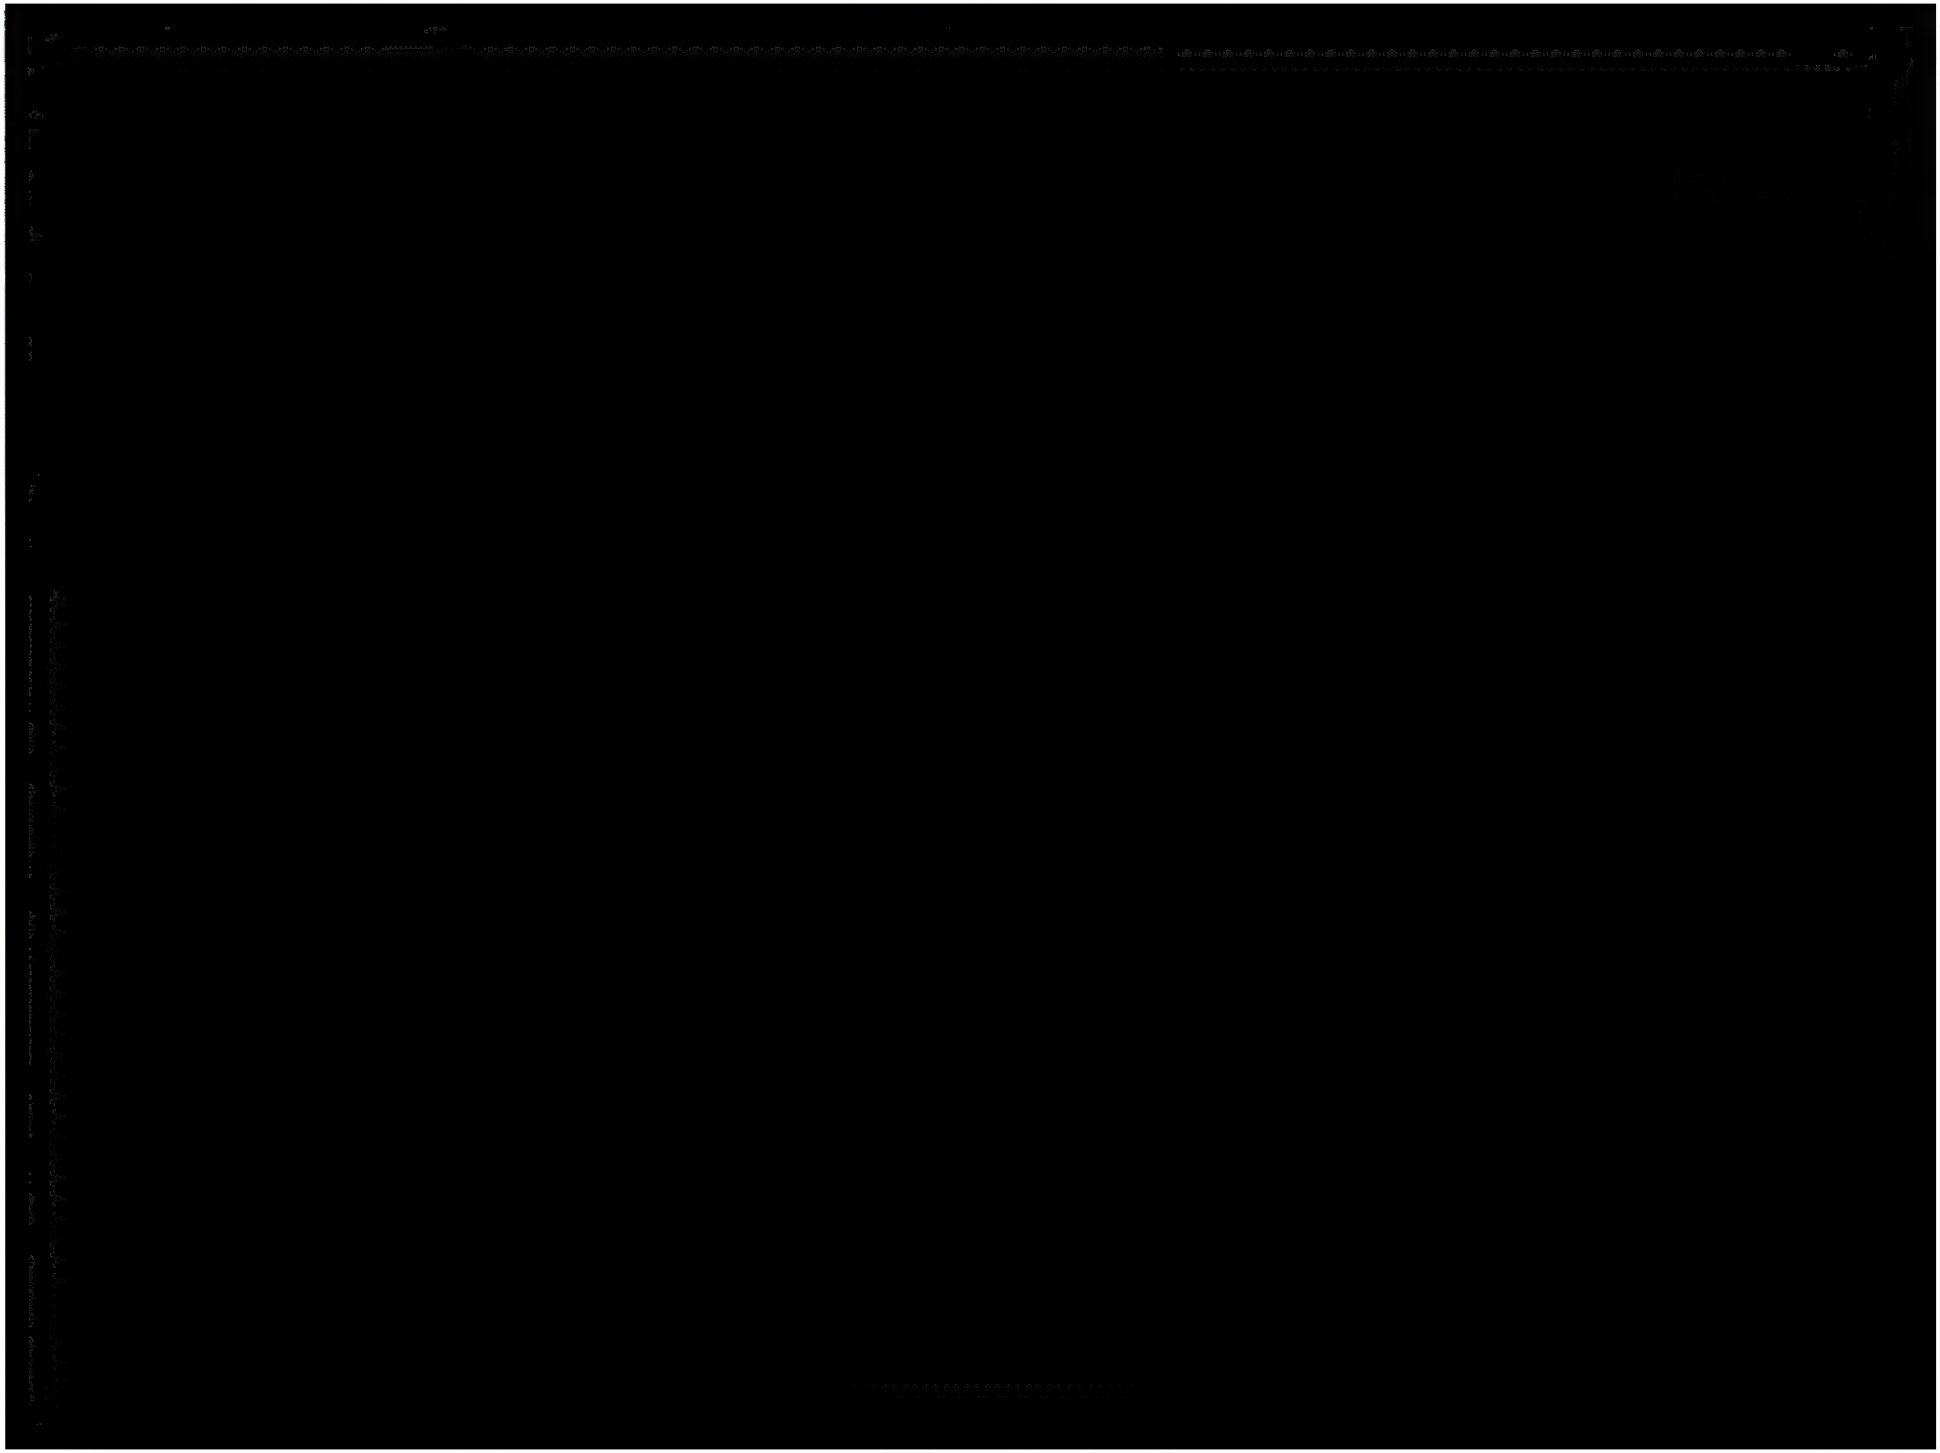
- New web services every day
- Scanning content for the userid rather than performing strong selection means we may detect activity for applications we previously had no idea about

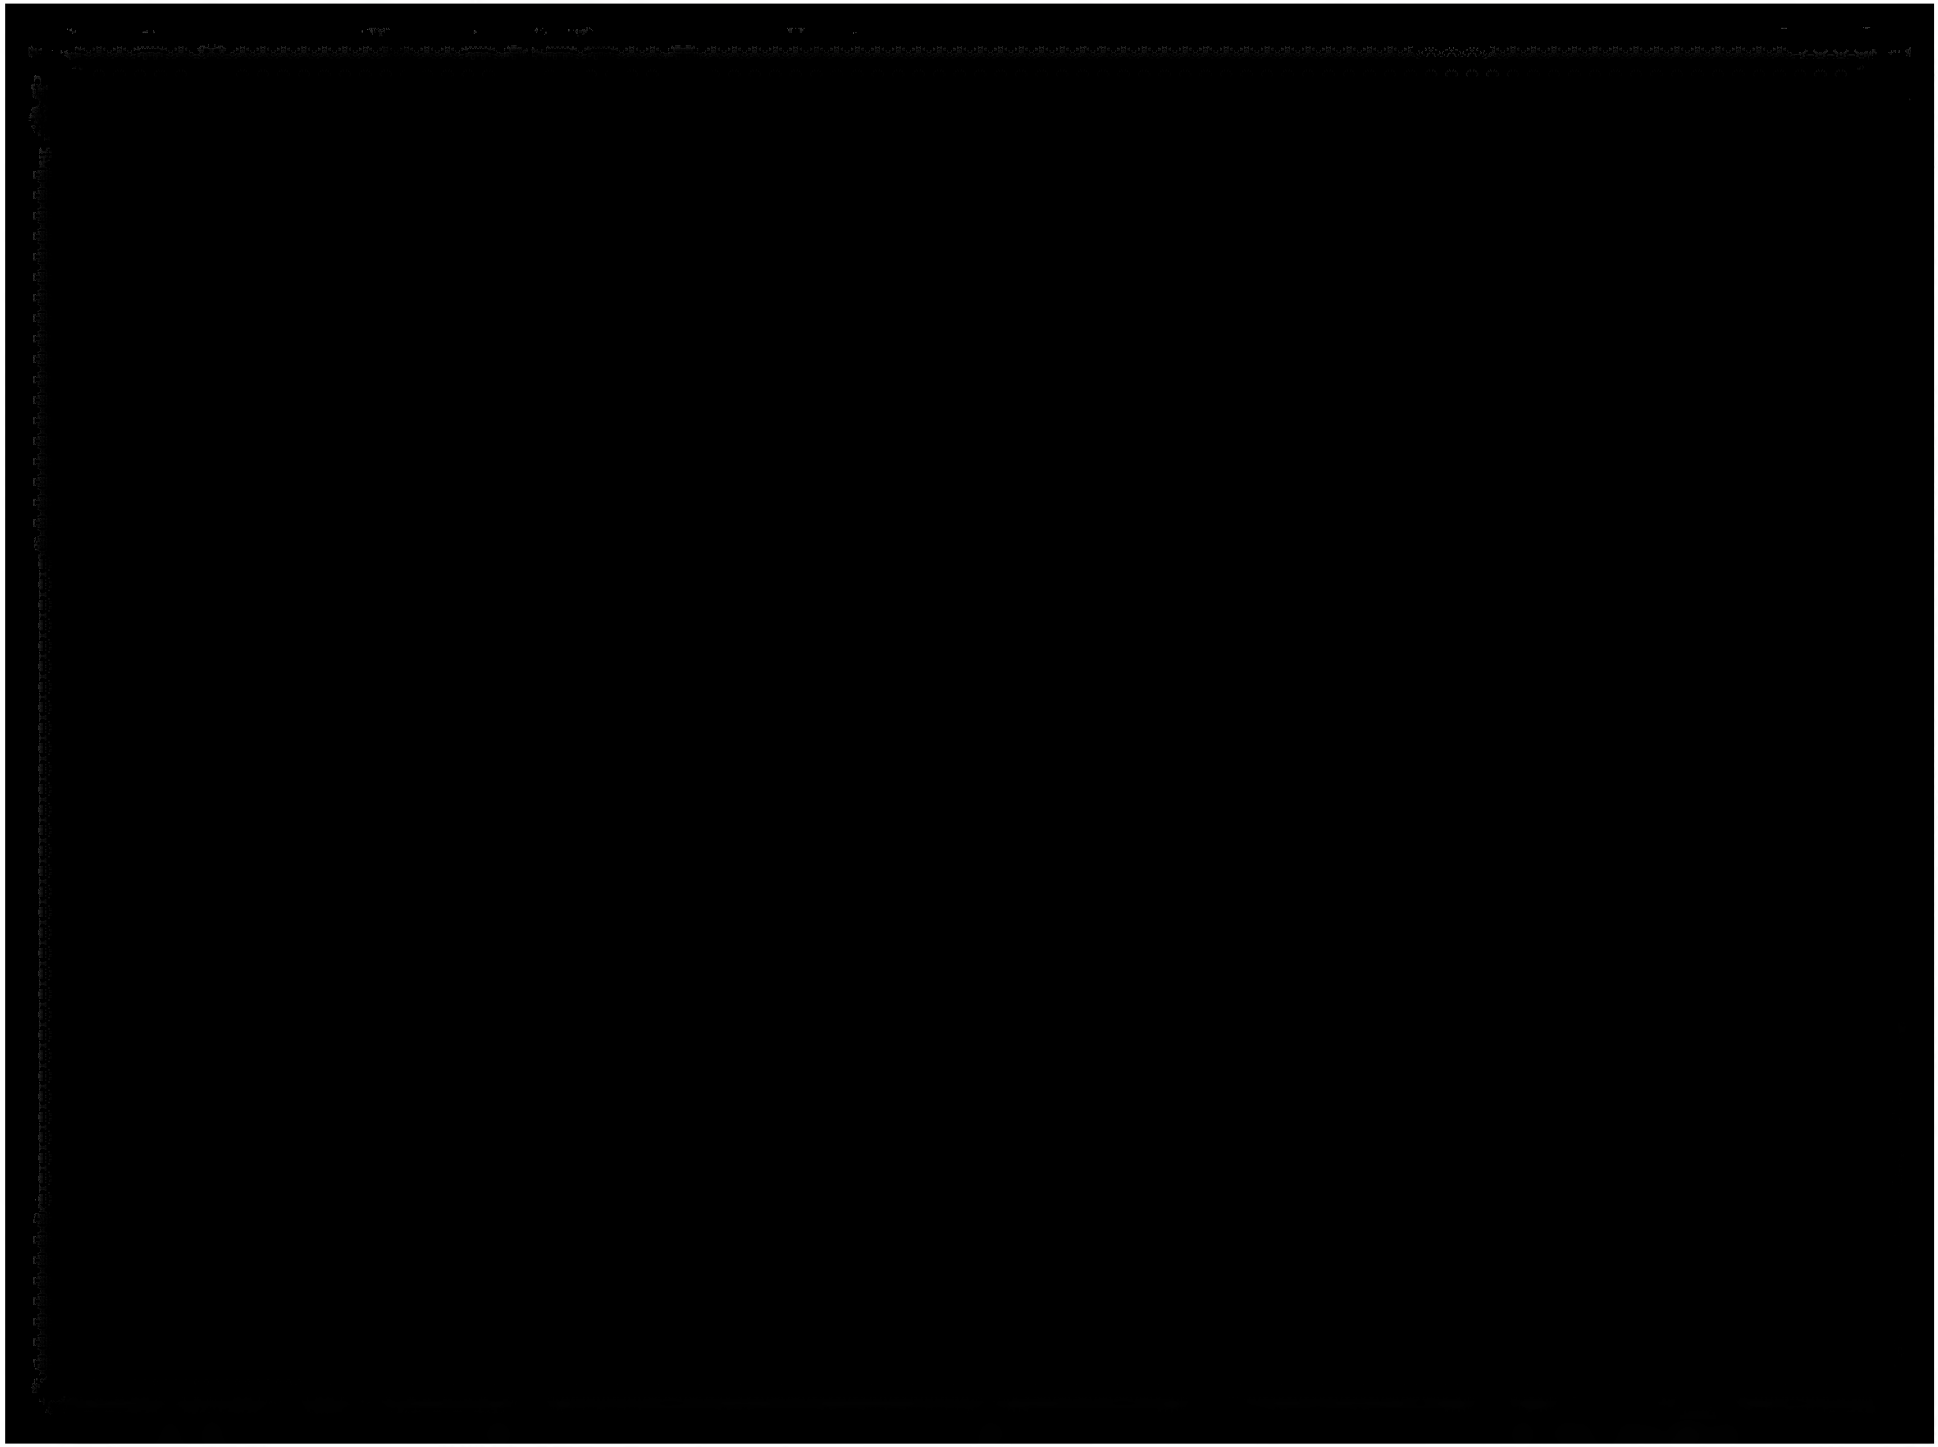
Entity Extraction

- Have technology (thanks to R6) – for English, Arabic and Chinese
- Allow queries like:
- Show me all the word documents with references to IAEO
- Show me all documents that reference Osama Bin Laden
- Will allow a 'show me more like this' capability

XKEYSCORE Success Stories

Over 300 terrorists captured using intelligence generated from XKEYSCORE





Innovation

- High Speed Selection
- Toolbar
- Integration with Marina
- GPRS, WLAN integration
- SSO CRDB
- Workflows
- Multi-level Dictionaries

Future

- High speeds yet again (algorithmic and Cell Processor (R4))
- Better presentation
- Entity Extraction
- VoIP
- More networking protocols
- Additional metadata
  - Expand on google-earth capability
  - EXIF tags
  - Integration of all CES-AppProcs
- Easier to install/maintain/upgrade
